

Database Application Description

Paws & Play is a database application designed to support the daily operations of a pet day care center. It manages pet owners, their pets, staff members, available services (such as full-day care, half-day care, and grooming), and bookings. The application allows staff to register new pets, record vaccination status, create and manage bookings, assign staff to services, and perform routine queries such as:

- List all pets checked in today.
- Show pets with expired vaccinations.
- List grooming bookings scheduled for Friday.
- Find all bookings handled by a specific staff member.

Requirements Statement

Entities

1. Owner — **Member_ID**, (Full_Name), Phone, E-mail, Address
2. Pet — **Pet_Code**, Species, {Breed}, Date_of_Birth, Weight_lb, Vaccination_Status, Notes
3. Service — **Code**, Name, Description, Base_Price
4. Staff — **EIN**, (Full_Name), Role, {Certifications}, Phone, E-mail
5. Booking— **Number**, (Check_In_DateTime), (Check_Out_DateTime), Status, Price, Kennel_Label

Relationships

- Owner — Pet: Owner may have zero or many Pets (0–M); each Pet belongs to exactly one Owner (1–1)
- Pet — Booking: A Pet can have many Bookings (0–M); each Booking is for exactly one Pet (1–1)
- Service — Booking: A Service can be selected by many Bookings (0–M); each Booking selects exactly one Service (1–1)
- Employee — Booking: An Employee can be assigned to many Bookings (1–M); each Booking can only have one Employee (1–1)

Functional Requirements

Create (Insert): Register Owners, Pets, Staff, Services, and Bookings.

Read (Query): List Bookings, Pets by Owner, Pets with Expired Vaccinations, Bookings by Service or Staff, Revenue Summaries.

Update: Edit Owner, Pet, Service, Staff, Vaccination Status, Booking Details.

Delete: Cancel Bookings, Remove Pets/Owners/Services/Staff if no active references.

Assumptions

- If Owner does not have Member_ID (new Registration) then they will be given one upon being entered into the system.
- Pets are uniquely identified by Pet_Code.
- Each Booking references one Service.
- Vaccination simplified to a single status field.
- Booking Check in time includes Date.
- Owners may be registered without any Pets. This supports pre-registration, waitlists, staged data entry, and keeping contact history for clients who are between pets.
- Owners can be added before pet details due to: pre-registration, kept between pets.
- Pets may exist with no bookings yet due to newly registered pets or a pet that only comes seasonally (cyclically).
- Bookings require a Staff member to be assigned
- Services may exist with no bookings yet. Booking gets assigned a Service
